

MP Author Professional

Easily Create Advanced Operations Manager Management Packs

Silect MP Author Professional makes it easy for IT Professionals and developers to create advanced Management Packs (MPs) for System Center Operations Manager or customize existing MPs. MP Author Professional allows you to extend Operations Manager to quickly and easily manage new workloads.

Extend Operations Manager

MP Author Professional builds on the capabilities of MP Author and adds key features to enable the development of sophisticated commercial-grade MPs. But you don't need to be a developer to use the product. MP Author Professional leverages an easy to use wizard driven interface so all users can build the necessary MPs required to manage even the most complex environment.

POWERED BY SILECT

Silect Software is the leading solutions provider in the Microsoft System Center marketplace. With well over 6,000 IT Professionals from 4,000 organizations using our products, users know they can rely on Silect for proven solutions to help them plan, deploy, operate and extend their Microsoft System Center and Microsoft Operations Management Suite deployments.

Special pricing for MP Author Professional is in effect. You can purchase MP Author Professional for only \$795 US. Contact Silect today to learn more.

Professional Management Pack Development

MP Author Professional delivers the following key authoring capabilities:

- **SNMP Support**
MP Author Professional supports development of commercial-grade MPs to manage SNMP devices. MP Author Professional supports browsing SNMP objects in your environment to enable easy and accurate creation of SNMP discoveries as well as SNMP probe and trap rules and monitors.
- **Advanced Classes and Discoveries**
Use MP Author Professional to create sophisticated classes and discoveries to ensure effective monitoring of the applications you need to manage in Operations Manager. Create classes, relationships and discoveries with MP Author Professional
- **Advanced Monitors**
MP Author Professional supports the creation of advanced monitors for your applications and systems. MP Author Professional supports authoring process monitors as well as dependency and aggregate roll up monitors. That's in addition to support for many other monitors including SNMP, database, event, performance and web site.
- **Advanced Rules**
Advanced rules ensure you are gathering all the data you need for monitoring and reporting. MP Author Professional provides support for authoring key rule types including Event, Performance, SNMP and Script rules and our wizards allow you to automatically create new views using these rules.

Need Advanced Authoring + MP Lifecycle Management?

Check out Silect MP Studio. MP Studio has all the great advanced MP authoring features of MP Author Professional plus MP documentation, version control, override management, testing and much, much more!
