# MP UNIVERSITY

WEDNESDAY JUNE 8

# Advanced Authoring

- Create watcher node for Share alerts
- Use Kevin Holman's new fragment
  - Watch for events
  - Run PowerShell script to get more information
- But the share isn't accessible by the default action account!
- Create Secure Reference
  - Modify rule to use Secure Reference
  - Set credentials
- Confirm results

# What's New – Microsoft 365 v3 MP

- Authentication: Secret, Certificate, or Delegated
  - Includes a monitor for certificate expiry
  - New Teams Chat added to Teams synthetic transaction (delegated)
- Management servers and gateways as watcher nodes
- Office response time rules can now test against TCP ports
  - For example, HTTPS or port 443
- SKU license thresholds are now defined as specific numbers
- Support Teams Network Assessment Tool
  - Skype for Business NAT still works

# What's New – MP Studio/Author v11

- Added support for Operations Manager 2022
- Removed support for Operations Manager 2012 and 180x
  - Should still work, but are no longer unsupported
- Errors deleting elements now produces actionable messages
- Windows event log handling updated to include all event logs
- Edit References dialog now shows unused references
- New wizards for WMI rules and monitors
- SCOM Explorer
